Business Continuity Planning (BCP)

Making Backups Work

It is not an enough for an organization to simply have back-up procedures in place. Data back-ups are only effective if the right data is targeted and an effective recovery procedure is in place. Business managers often discover - all too late - that back-ups were not configured the way they understood them to be.

WatSmart Secure Business Continuity Planning (BCP) can help. **BCP** consists of an on-site assessment and a supervised simulated recovery procedure. A WatSec expert will monitor this process with your staff to ensure that the entire back-up process - from nightly saves to full restores - operates exactly as you expect.

WatSmart Secure Business Continuity

Planning (BCP) provides you with the security of knowing that you can count on your back-up/restore system. After a comprehensive on-site assessment of existing back-up procedures, WatSec will facilitate a trial-recovery. In consultation with your management and IT staff, WatSec will evaluate your organization's procedures. This evaluation will place a special emphasis on your particular needs and expectations. WatSec will issue a report that recommends steps for improvement.

WatSmart Secure BCP offers you:

- Media storage lifespan
- Nature of off-site storage
- Segregation of duty
- Configuration backup strategy
- Documentation backup
- Code version backup
